

Getting vaccinated *not only can help save yourself and protect the lives of others, it can help us return to work, school, and other day-to-day activities faster.*

FAST FACTS about COVID-19 Vaccines

A COVID-19 Vaccine helps keep you from getting sick from the virus

The vaccine can still help you, even if you have already had COVID-19

You cannot get COVID-19 from the vaccine

The vaccine will not make you test positive on a COVID-19 test

- COVID-19 vaccines are critical in the fight against the pandemic, and the ones being distributed are **scientifically proven to be safe and effective**.
- Vaccines teach our **immune systems how to recognize and fight the virus** that causes COVID-19.
It typically takes a few weeks for your body to build immunity after vaccination. This means you could still be infected with COVID-19 just before or just after your vaccination, and still get sick.
- The most common side effects of the vaccines include sore arms, fevers, and tiredness with **72 hours after the vaccine**.
These symptoms are normal and are a sign that the body is building immunity.
